

STABLE

Incident handling is in good shape — response times, SLAs, and CSAT are all on target and trending in the right direction. P1 count is consistent with the 12-week average. 1 incident still in Monitoring, awaiting resolution.

The key concern remains PIR action completion — at 46% against a target of 85%, this is a persistent gap. CRM Experience (19 open) and CRM CORE (16 open) are the largest contributors and need attention.

INC-8611

Lottogo Production

Resolved

3 Jun · 14:31 UTC

After the `crm-api-enforce-endpoint-permissions` feature flag was enabled in production, Lottogo and Coinbar began reporting CRM access issues. Affected partners were unable to access or retrieve certain CRM data as expected. Feature flag disabled as a rollback measure to restore previous permission behaviour, resolving the immediate access issues.

INC-8571

Galabet Production

Monitoring · awaiting fix

2 Jun · 21:38 UTC

The "My Rewards" button intermittently fails to appear for Galabet player and internal accounts due to a race condition in BetConstruct's frontend integration. Affected users intermittently lose access to the "My Rewards" section for the duration of their session. Root cause confirmed through network activity analysis on affected accounts.

NOTES & CONTEXT

PIR action item completion

Following a meeting with Juan, Linus, and Producers, we have agreed to a more focused format for the weekly PIR review, with the Head of SRE owning and prioritising action items going forward.

Betconstruct platform incidents

Two open incidents require Betconstruct to acknowledge: a double-bonus event bug on H2Bet and a Rewards section visibility issue on Galabet. Siria and Robert have been engaged, and we are now escalating to B2B to establish a more robust incident channel with our platform provider.

Galabet Production

PROBLEM

The "My Rewards" button intermittently fails to appear for Galabet player and internal accounts due to a race condition in BetConstruct's frontend integration. Reward events continue to fire and are visible in Fast Track, but affected users cannot see or interact with their rewards in the frontend.

IMPACT

Affected users intermittently lose access to the "My Rewards" section for the duration of their session. The issue is not constant — it depends on whether the race condition triggers during page load. The partner has paused their rewards campaign while awaiting the fix from BetConstruct.

CAUSE

An intermittent race condition where FasttrackCrm.init() is called via a setTimeout before the CRM SDK has fully loaded. When this happens, initialisation fails silently — authentication does not occur and the "My Rewards" button does not render for that session. The same root cause has also been identified on padisahbet, where a host-side fix has already been verified.

ACTIONS TAKEN

Root cause confirmed through network activity analysis on affected accounts. The required technical fix (waiting for window.FasttrackCrm before calling init()) has been documented and shared with BetConstruct. The incident remains open pending BetConstruct's implementation and confirmation.

H2Bet Production

PROBLEM

Duplicate bonus grants have been observed in H2Bet production. BetConstruct returns an HTTP 503 Service Unavailable response after a bonus has already been credited on their side. Fast Track then retries the request, which can result in the same bonus being granted more than once. This appears to be a long-standing pattern present for at least the past 24 weeks.

IMPACT

Recurring bonus leakage for H2Bet, averaging ~500 extra bonus grants per week over 24 weeks. Since idempotency improvements to the Bonus Distributor in February, several weeks have dropped below 300 extra grants. The majority of duplicates relate to FreeSpins, though Cash bonuses are also affected. A list of affected UserID/BonusID combinations for May is being produced and shared with H2Bet.

CAUSE

BetConstruct can return a 503 error even after successfully crediting a bonus to the player. From Fast Track's perspective the request appears to have failed, so the Bonus Distributor retries it. This is not the expected or agreed behaviour from the operator API. Weekend monitoring on 6–7 June found no new duplicates despite BetConstruct 5xx error bursts, confirming the risk is intermittent and tied to a specific failure pattern.

ACTIONS TAKEN

Idempotency improvements deployed (PR #122). Observability improvements now allow duplicate detection in minutes. May extract being prepared for H2Bet to assess business impact. Formal investigation with BetConstruct is the recommended next step — the root fix is expected to sit with them. Three mitigations have been reviewed (treating 503 as success, secondary verification endpoint, External ID idempotency) but none have been endorsed or deployed pending partner alignment.

Spinbet Investigation

PROBLEM

Spinbet's SendGrid account was breached, requiring immediate containment. As part of the response, the compromised SendGrid credentials were removed, which disrupted email sending for both Spinbet and Razed.

IMPACT

Email sending was fully disrupted for both Spinbet and Razed, as both environments shared the same SendGrid key. Additional follow-up work is required to rotate external-facing API keys for affected integrations. Fast Track's internal investigation found no indication of an active security threat — no suspicious activity was identified in Cloudflare logs, Wiz, or database logs.

CAUSE

A breach of Spinbet's SendGrid account. Because Spinbet and Razed shared the same SendGrid credentials, removing the compromised key as a containment measure caused email sending failures in both environments simultaneously.

ACTIONS TAKEN

Affected environments locked, email distribution scaled down, and compromised SendGrid credentials removed to contain the breach. Security risk has been contained. Focus has shifted to helping the partner restore email functionality by setting up an alternative email provider for both Spinbet and Razed. External-facing API keys are being rotated with credentials shared securely via 1Password.
